REASON FOR ALLOWANCE

1. Fitzgerald, Necaie and Lin disclose various types of wheel assembly comprising a spinner that is rotatably attached to the wheel through the use of a hub member and bearing. Kellog discloses an apparatus for correcting unbalances in a wheel in which a power driven wheel spinner such as a standard electrically driven wheel spinner is applied to the tire of the wheel so that when the motor of the spinner is energized, the wheel will be rotated to correct unbalances in the wheel. McCaster et al disclose a wheel assembly for motor vehicle comprising a hub including a central portion and a connecting portion that radiates from the central portion, a functioning clock is mounted on the front of the connecting portion through a plurality of bearings. However, none of the references of record suggests a wheel spinner assembly, wherein the spinner assembly comprises drive motors for imparting rotational force on the spinner independently from the motor vehicle in the manner defined in the instant claims 1, 4, 10, 16 and in combination with other limitations of the claims. Therefore, claims 3, 5, 6-9, 11-16, 18-20, depending therefrom, are considered to be allowable.
